

51 05-C-09 Trees Bank

The opening ceremony of Trees Bank has been held on December 24, 2013. The green area in the park is about 5 hectares which has been used for transplanting and to improve the survival rate of transplanted trees. This plan leads to effective management of transplanting trees and seedlings, and provide green resource for sharing with.

The main objects in this plan are the street trees that affect public security so that must be transplanted to Trees Bank. The number of trees will change due to the immigration and migration, so the long-term goal is to achieve the stability in slightly increasing amount of trees until the park is full.
