

52 05-C-11 Balance in excavation and refill in development project to reduce transportation mileage

1. Proper reuse of construction waste to cut transportation mileage and to reduce construction waste. The project is designed for a balance in excavation and refill to avoid purchasing of sand and stone from outside. At the same time, we recycle waste asphalt and concrete construction waste from existing road in order to achieve the goal of energy conservation and carbon reduction.

2. Since it relates to the long-term plan during 2018-2022, the amount of recycled sand and stone and bituminous concrete each year is estimated. The plan will be arranged for actual situation.
