## Green Transport Plans

The City of Gothenburg has started to add special “Green Transport Plans” to the city planning process. When a certain new or reconstructed city area are planned, all key players such as construction companies, offices, employers, property owners and traffic planners are gathered. A Green Transport Plan highlights different measures that can be taken by the enterprises and property owners to reduce the car and truck traffic in the area, and what the municipality can do to promote sustainable transport modes. The plans usually include transport policies, mobility management measures, parking policies or car sharing promotion, and are formalized in a letter of intent between the city and other relevant stakeholders.

When the new or reconstructed area is ready, annual follow-ups are made. This is to ensure that all stakeholders are doing what is needed to fulfill the intentions of the plans and adjust the measurements if necessary, to reach the mutual goals and achieve sustainable and efficient transports in the area.
