

City of Gothenburg

Investments in Photovoltaics at Bathing Facilities in Gothenburg.

During the past year, the City of Gothenburg has installed photovoltaic systems at two of the city's baths; Kärrabadet and Lilla Amundön. Additional installations are planned at other baths. A total installed capacity of 80 kW at a cost of 917 000 SKR will give an output of around 75,000 kWh per year. The installation has been partly funded by means linked to the Environmental Programme (see other action). The measure has been implemented by the Sports and Associations Administration.
