

### **33 Promote Solar Power Generation System Installation on Public Building Roofs Program**

1. In order to enhance the promotion of renewable energy, actively promote solar power generation system installation on public building roofs. The plan adopt roof renting way, system company is responsible for facility investment and further construction; it not only can increase the renewable energy usage rate, but utilize the unused public building roof space.
2. Building management unit can also have power generation feedback money to finance the government through renting roofs.
