

Uppsala Climate Protocol- phase 2

In June 2012 the second phase of the project, the Uppsala Climate Protocol II, started and twenty-five organizations signed the protocol. As in the first phase, the participants are spread over a wide number of businesses/sectors. In the second phase there are going to be several and more hands-on focus groups. The first one to form were a focus group for waste that several actors from both the private and public sector are involved in.

As in the first phase, the members of the protocol are obligated to annually report their energy use and GHG emissions together with a group of key ratios as number of employees and volume of business. This process will be followed through during the fall of 2012. The members will also list mitigations to implement during 2013.

A new actor-scenario will also be modelled in LEAP. The new scenario will have a more holistic perspective and show in a more patent manner which impact the mitigations will have on Uppsala in general. Backcasting will be used as a perspective instead of forecasting. The base year for the data will be 2013.
