## GENERAL POLICY FOR HIGHER BUILDINGS

*Adopted by City Council on May 6, 1997  
Amended February 1, 2011*

### Application and Intent

These guidelines are to be used in conjunction with all applicable Official Development Plans for buildings seeking approval for significant additional height above current zoning and policy, or for those entering into the Queen Elizabeth View Corridor. The intent of these guidelines is to mark the prominence of the Central Business District in our downtown skyline, while also providing opportunities for strategically placed height at two prominent bridge “gateways” to mark the entry into downtown from the Burrard and Granville Bridges.

### General Policy for Higher Buildings

The following should be considered when reviewing proposals for Higher Buildings (i.e. those which significantly exceed current height limits and/or enter into the Queen Elizabeth View Corridor):

- Higher Buildings will only be permitted within the areas identified below in Figure 1;
- The tallest buildings ( i.e. ~ 550-700’) should be located within the Central Business District with the tallest buildings (i.e. ~ 700’) located on one of Vancouver’s three primary streets: Georgia, Burrard and Granville;
- Secondary heights may be considered for buildings at the Granville and Burrard Bridgeheads with a single prominent tower (~ 500’) in axial alignment with the Burrard Bridge, and two towers framing the Granville Bridge Gateway (~ 425’);
- All other application for additional height at these two bridgehead locations should be analyzed to ensure that the experiential intent of these gateways is maintained;
- All Higher Buildings must establish a significant and recognizable new benchmark for architectural creativity and excellence, while making a significant contribution to the beauty and visual power of the city’s skyline;
- Higher buildings should demonstrate leadership and advances in sustainable design and energy consumption and as a result must be subjected, not only to current review requirements, but also to review by a Council appointed panel including respected community leaders, notable local and international design experts, and leaders in sustainable design;
- All Higher Buildings must significantly demonstrate and advance the city’s objective for carbon neutrality for new buildings with a stated objective to achieve a 40-50% reduction in energy consumption from 2010 levels;
- As a component of this enhanced review, a special public engagement, such as a public forum or guest lecture, should be held featuring the guest panel members and experts to expand public discussion and education around architectural excellence and green design in Vancouver.

In addition, all Higher Buildings should be considered with careful effort to provide a lasting and meaningful public legacy to Vancouver and should include careful consideration of the following:

- The buildings should achieve community benefits (i.e. as a recipient site for density transfers; retention of important heritage components; provision of significant cultural or social facilities; or provision of low cost housing);
- The development should not involve the demolition of a Class ‘A’ heritage building;
- The building should include activities and uses of community significance such as public observation decks or other public amenity;
- The development should provide on-site open space that represents a significant contribution to the downtown network of green and plaza space;
- The building should not contribute to adverse microclimate effects;
- Careful consideration should be given to minimize adverse shadowing and view impacts on public realm including key streets, parks and plazas, as well as neighbouring buildings;
- Signage on the buildings should not be located at a height which exceeds the building’s current height limit.
